

CODE REFACTORING AND BUG FIXING

Report Work

Reported By : Ayush Raj

Bug 1 : Missing of attribute in button tag

Description : The button tag is not containing any attribute which can trigger while clicking it.

```
<button>Add Note</button>
```

Solution : I have added an attribute '**type**' whose value is '**submit**' which can trigger when clicked to send response further

```
<button type="submit">Add Note</button>
```

Bug 2 : Missing methods in '/' route in [app.py](#)

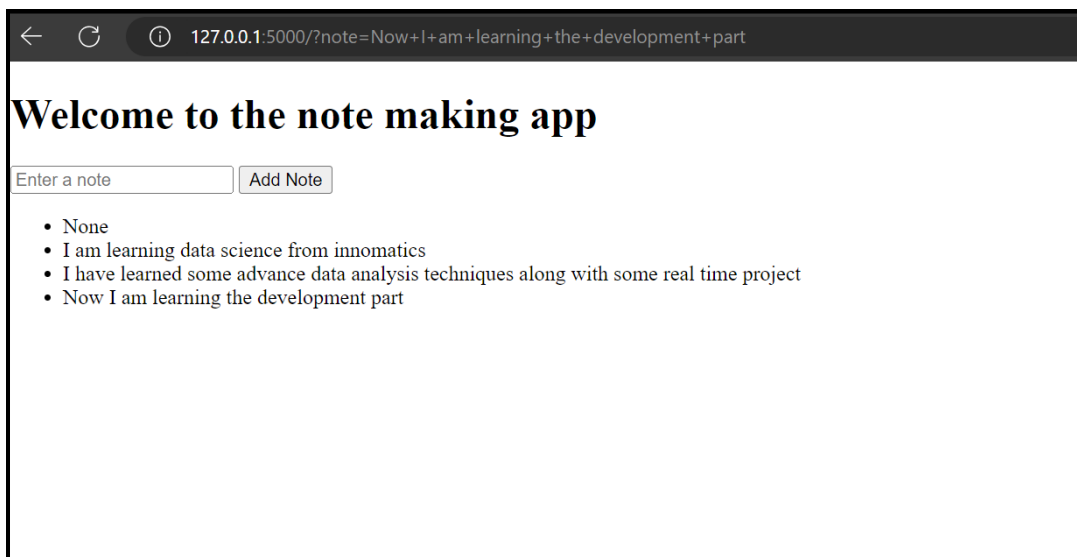

Description : In '/' route only **POST** method is used however [home.html](#) is sending **GET**(default) response also

```
@app.route('/', methods=["POST"])
```

Solution : I have added one more '**GET**' method in '/' route in order to get response from [home.html](#)

```
@app.route('/', methods=['GET', 'POST'])
```

Now my app is running fine

A screenshot of a web browser window. The address bar shows the URL '127.0.0.1:5000/?note=Now+I+am+learning+the+development+part'. The page content includes a heading 'Welcome to the note making app', a text input field with the placeholder 'Enter a note', and an 'Add Note' button. Below these, there is a bulleted list of notes: 'None', 'I am learning data science from innomatics', 'I have learned some advance data analysis techniques along with some real time project', and 'Now I am learning the development part'.
